NOF Travels tur til Kenya vinteren 2015 var en tur med stor vekt på mye Afrika på kort tid. Turen var en fugletur med mulighet for et veldig høyt antall arter i forhold til størrelse på området vi reise i og lengde på turen. Vi endte tilsammen på så vidt over 390 fuglearter og et betydelig antall pattedyrarter. For safari var en selvfølgelig del av turens opplevelser.

Dag 1-2: Oslo - Nairobi - Masai Mara, 16.januar

Vi landet sent på torsdag kveld i Nairobi, og overnattet i byen. Tidlig neste morgen var det frokost og avreise. Uten fugleguide, da han trakk seg denne morgenen grunnet malaria! Mer om det senere, vi kjørte avgårde og hadde første stopp på et av de kjente utkikkspunktene på vei ned i Rift Valley.

Bergvever

Allerede her rant det på med nye arter for de fleste, som bergvever, bergbieter og auguvåk! Videre kjørte vi mot Naruk og med det inn i Masaienes rike. Og derfra - til Masai Mara! Nærmere bestemt til Sopa Lodge, i åsene på østsiden av de kjente savannene. Her etablerte vi oss fort på terrassene med teleskop og kikkerter. Og kunne nyte sangen til grønnflekkalvedue, masse brunmusefugler rund bassenget og et par med strimmelparadismonarker. En vidunderlig følelse! For de ivrigste ble det arrangert en ettermiddagstur inn parken, som egentlig heter Masai Mara National Game Reserve, og administreres av masaiene selv på godt og vondt. Denne gangen virket det som om vernet var styrket, og det var gledelig å se. Og i områdene nedenfor hotellet fikk vi se en karakteristisk turart vi bare fikk se her: småperleskjeggfugl!

Og så var det lokal fugleguide da. heldigvis hadde vi evaluert et par kandidater, og inntil det siste holdt kontakten med ytterligere en som da egentlig ikke fikk jobben. Så reiselederen vår ringte han tidlig på dagen, og til middag hadde han kommet seg fra Nairobi til Masai Mara ved å hake, inklusive på moped de siste timene inn i parken! Utrolig innsats. Og en strålende guide skulle det vise seg å bli!

Dag 3: Masai Mara, 17.januar

Lørdag ble det en hel dag safari og fugletittinng i Masai Mara. Bilene med åpne tak gir utrolig utsyn og muligheter til å se og ta bilder, men tre biler etterverandre på samle og tildels støvete veier byr på kommunikasjonsutfordringer. Ikke så lett for alle å få med seg hva som skjer i bilen med guide, men desto større muligheter til å oppdage ting på egen hånd! Det ble en dag med (nesten) alle de store og kjente savanne-dyrene med elefant, kappbøffel og løve i spissen, topi og andre antiloper, giraffe, sebra og gnu, og så videre. Det ble også en stopp (og lunsj) ved Mara elven i området der den store gnu- og sebra-vandringen foregår i august, med flodhest og krokodiller i hopetall. I tillegg alle fuglene (98 arter!), med store gribber og storker, ned til praktfulle stærer, vevere og

astriler. Spesielle observasjoner som nok de fleste vil huske ble: skiferfalk, øregribb, maa-simeis og purpurastrild: Og så fikk enkelte deltakere med seg fugler langt nord for egentlig utbredelsesområde: fregnennattravn og ikke minst rusthalelever!

Dag 4: Masai Mara - Kakamege Forest, 18.januar

Søndag var tiltenkt en lang kjøretur på formiddagen. Det ble dessverre til at hele dagen gikk til kjøring. Vår hovedsjåfør gjorde et veldig dårlig veivalg, og trumfet dette gjennom mot turleder, reiseleder og fugleguides råd og planlegging. Resultatet ble over fem timers grufull kjøring på særdelses dårlige veier nordover fra Mara området, og deretter ytterligere fire timer frem til Kenyas eneste rest av regnskog: Kakamege Forest Reserve (som drives som en nasjonalpark). Denne skogen er en liten rest av regnskogen som en gang var sammenhengende fra Kongo bassenget, via Uganda og hit til vestre Kenya. Nå er det over 1000 kilometer tilbake til den store skogen. I Kakamega bodde vi på Rondo Retreat Centre, et hvilested for misjonærer med en utrolig beliggenhet, atmosfære og hage! Umiddelbart ble det i kveldingen observert nye utrolige og store regnskogarter som kjempeturako og gråkinnhornfugl.

Dag 5: Kakamege Forest , 19.januar

Mandag startet med en lang gåtur i skogen fra selve Kakamega Forest Station. Og i Kakamega er det 100% andre fugle- og pattedyrarter. Alle er knyttet til regnskogen, og finnes altså i Kongo bassenget! Her er det store turakoer og små sangere, store ørner og bitte små manikiner. Alle annerledes og unike i denne unike biotopen. Og for noen turens absolutte høydepunkt, brunryggbiter, krydret med en så sjeldent fugl som svartkronebrednebb (samme sted).

På ettermiddagen ble det flere runder i skogen med utgangspunkt i Rondo. Bare det å stå på plenen i hagen ga til stadighet nye arter og opplevelser. Ikke minst en rekke gode fotomuligheter. Det ble tatt mange bilder denne dagen! Nevner slike arter som rødtoppturako, smaragdgjøk og gråkappeastrild. Et av turens høydepunkter for mange ble denne kvelden virkelig nærbeklart med en prikkdunrikse. Vår guide plukket ut noen lokkelyder, og fortalte oss at den kom til å løpe over veien for å gjemme seg langs bekken, og det gjorde den! Alle fikk sett den veldig tydelig på 2-5 meters hold. Men ingen rakk å ta bilde, man blir rett og slett bergtatt!!

Dag 6: Kakamege Forest - Lake Nakuru, 20.januar

Tirsdag ble det en rolig start med ny morgentur i parken, for så å sette seg i bilene igjen. Nå bar det opp i 3000 meter og kryssing (nummer to) av ekvator på vei tilbake til Rift Valley. På veien stoppet vi kort ved noen dammer nær "summit", Timboroa. Her ble det noen få turar-ter som knoppsothøne og svartrikse.

Så bar det nedover til Lake Nakuru National Park, en utrolig rik nasjonalpark, en liten juvel i et område med stadig større press fra omgivelsene, fra byen Nakuru såvel som omkringliggende landbruksvirksomhet. Og allerede før vi kom frem til Sarova Lion Hill hotellet oppdaget bakerste bussen "Black Rhino" (spissneshorn) langs veien. Så da var det fort gjort å bli kvitt bagasjen og komme seg ut igjen. Og alle fikk sett de to bladspisende gigantene i buskas-set. Og ikke lenge etter ble det "White Rhino" (stumpneshorn), giraffer og en rekke andre savannedyr igjen. Og et vel av fugler, hele nasjonalparken kalles "a birdwatchers paradise",

store tall av låvesvale, flamingo og dvergflamingo, samt kjente vadere dominerte. Ellers er det mye hvitpelikaner og storker som dominerer langs natron sjøens bredder. Vi ble ute til det mørknet!

Dag 7: Lake Nakuru - Mount Kenya, 21.januar

Onsdag ble det en lang morgentur i Lake Nakuru parken, der nærbilder av slagfalk kanskje ble høydepunktet for mange? Eller nærbонтakt med bantuhauk, sangklippeskvett og gulbrilledue på parkens høyeste punkt? Etter denne rundturen var det bare å pakke i bilene igjen, denne gang ble det mange bilder (og noen diplomer) ved kryssingen av ekvator, og en ikke for lang tur videre opp til Mount Kenya National Park, der vi bodde på Mountain Lodge. Hotellet er kjent for at alle rommene har direkte utsyn til et opplyst vannhull. Det var mye vann i området, så vannhullet hadde ikke så godt besøk, men en foringsplass for pantergenetter, samt en jaktende gråhubro, gjorde at det var vanskelig å gå å legge seg.

Dag 8: Mount Kenya - Aberdare, 22.januar

Torsdag startet med mulighet for en langs gåtur i Mount Kenya National Park. På trange stier med visshet om at både elefanter og leoparder er vanlige arter i området. Spennende, men ingen dramatikk. Rundt vannhullet var det statig noe å se på fra rommene: krittnakke-duer, ravinesvaler, toppørn og kronørn. Utpå dagen ble det en kort tur over til Aberdare National Park. Her sjekket vi inn på det tidligere kjente Treetops Hotel. Kjent og mye besøkt fordi Dronning Elisabeth II var her på safari, da hun ble dronning! Men tomt og forfallent, skuffende rett og slett. Generelt var turisttrafikken redusert betydelig grunnet uroen i nordøst og terrorangrepene i Nairobi, men så trist som dette var det heldigvis ikke andre steder. Det ble en runde i området, innenfor gjerdet som skilte oss fra nasjonalparken og villdyrene. Og i det vi kom tilbake oppdaget vi at det var en ung kappbøffel på innsiden! Og senere på kvelden en hyene..., som ønsket seg ut til dyrene rundt vannhullet: flere hyener, elefanter, spissneshorn og kappbøfler.

Dag 9: Aberdare - Lake Naivasha, 23.januar

Fredag morgen startet vi på en lang og rolig tur gjennom Aberdare National Park, en virkelig opplevelse av å være "i fjellet" i Afrika, og igjen med en rekke nye arter spesielle for området og biotopene. Her dukket det opp fugler som klatreahuk, blåkroneturako, sølvkinnhornfugl og bergskvett. Og flott utsikt, tilbake mot Mount Kenya såvel som over myr og fjell inne i parken. Utpå dagen kjørte vi ut av parken og bratt ned i Rift Valley igjen, denne gangen ned til ferskvannssjøen Lake Naivasha som er en del av et nasjonalpark regime i denne delen av riftdalen. Ferskvann er nye arter, og hagen / parken knyttet til Sopa hotellet her byr på en rekke unike opplevelser, med giraffer foran balkongen på dagen og flodhester etter mørkrets fremskritt. Og ferdselforbud mellom bygningene uten voktere. Føles ikke farlig, men det er fort gjort å bli for uforsiktig. Og her dukket det opp strålende fotomotiver som hakkespetter, dvergpapegøyer (en hybrid versjon), hvithodeskjeggfugl: Og mengder av ulike vann- og vadefugler.

Dag 10: Lake Naivasha - Nairobi - Oslo, 24.januar

Lørdag morgen ble tilbrakt i parken og området ned til vannet, nå var det nye vadere, hegner og riksefuglene som ble lagt til lista. Og så var alvoret der, pakking og kjøreturen oppover mot Nairobi. Det går bare en vei her i praksis (omkjøringsveien tar timer), så en bilulykke her medfører store forsinkelser. Men vi var ute i god tid, og alle rakk en middag på flyplassen etter en avskjedssceremoni med sjåfører, reiseleder og fugleguide. Kjøreturen ut fra Mara var heldigvis glemt av de fleste nå, alle fikk litt ekstra til familien. Så var det fly hjem og ankomst Gardermoen søndag formiddag!
