**NOF travel tur til Øst Kina 23. april - 06. mai 2015**

Turen gikk til Shanghai etter en flyreise fra Oslo til Shanghai via Helsinki. Tolv deltagere deltok på turen i Øst Kina. Vi besøkte Yangshan øyene utenfor Shanghai i to dager. Reisen fortsatte mot Rudong distriktet i Jiangsu provinsen. Der hadde vi hovedbase i Yangkouzhen byen på Holiday Village of Hot Spring hotell i seks dager. Derfra hadde vi daglige ekskursjoner til flere lokaliteter. Turen fortsatt mot Mt Emeifeng i Fujian provinsen via Nanchang i Jiangxi. På Emeifeng bodde vi nesten på toppen av fjellet i tre dager. Nest siste dag reiste vi mot Nanchang flyplass. Videre tok vi fly mot Shanghai hvor vi overnattet til neste dag og så reiste vi hjem.

Utgangspunktet for turen var vårtrekket og ikke minst vadere langs Gulehavskysten. Zhang Lin var arrangør for turen og han er spesialist på vadere. Han jobber aktivt for å verne områdene hvor vaderne trekker og særlig for den mest truende skjesnipen i Kina. Under våre besøk i Rudong anslår vi at det var ca. 13 300 individer av 39 forskjellige vadearter. På småfuglfronten var vi omgitt av et variert og fargerikt fugleliv. Vi opplevde at fuglene var meget sky og vanskelig å oppdage.

Lin gjorde en fantastisk innsats for å finne de fleste artene. Mange av oss følte at det var høst. Akkurat som om vi var på en av de meste kjente øyene i Norge for å finne sibirske fugler.

*Skjesnipe med sandløpere og rødbrystsnipe, Dongtai, foto: Trond Haugskott*

På Mt Emei opplevde vi et helt annet fugleliv. Fugler som finnes i bambusskog, høyereliggende eldre skog og vassdrag. Tåke og regnvær gjorde stedet mystisk. Her finner man landet for fasaner.

Gjestfrie og nysgjerrige kinesere var imponerte over europeiske turister med stort fotoutstyr. Mange av oss stilte oss opp for at lokalbefolkningen skulle få tatt bilder av oss på sin mobil. Tradisjonell kinamat av alle varianter var en opplevelse for mange, og det var ikke minst utfordrende å spise med pinner.

Til sammen observerte eller hørte vi 253 fuglearter under turen.

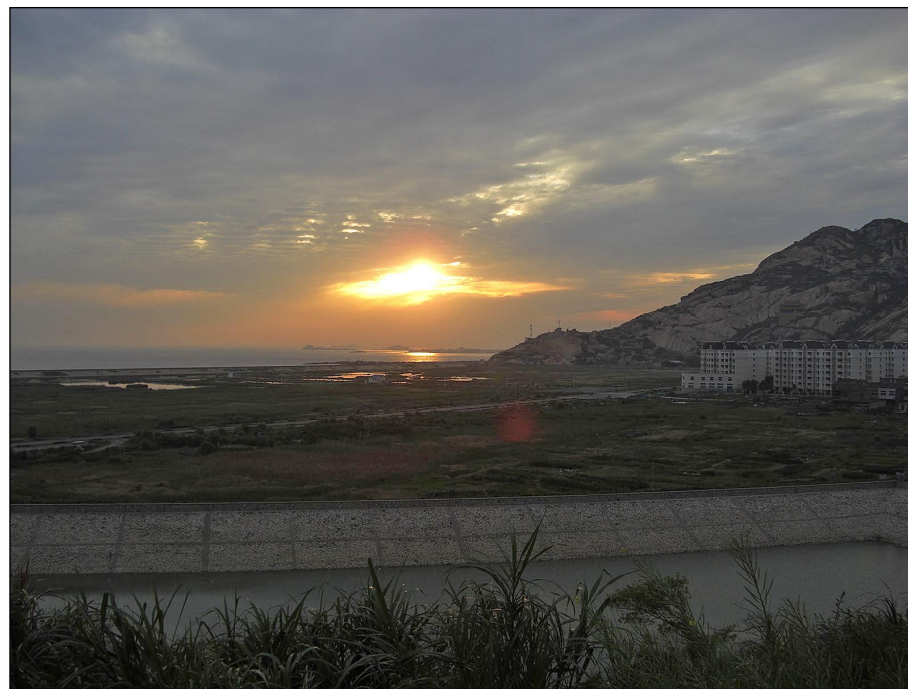

### **Dag 1 – Torsdag 23. april. Reisen.**

Flyet fra Oslo var forsinket, noe som gjorde at starten ble litt stressende. Vi måtte løpe men jeg så ikke ”Transfer” skiltet og vi løp helt ut, og dermed måtte vi gå gjennom sikkerhetskontrollen en gang til. Heldigvis brukte vi samme flyselskap fra Oslo til Shanghai, så boarding var også forsinket. Vel installert på Airbus A340-300 var vi klare for natten!

### **Dag 2 – Fredag 24. april Shanghai Pudong - Greater Yangsan**

**Første inntrykk av Kina.** Etter en natt på flyet landet vi rundt klokka 07:30 på kinesisk jord og ble tatt imot av vår lokale guide Lin. Samlet i en liten buss med all bagasjen kjørte vi mot Yangsan øyene.

*Gruppen på Greater Yangsan og solnedgang, foto: Kristin Vigander og Trond Haugskott.*

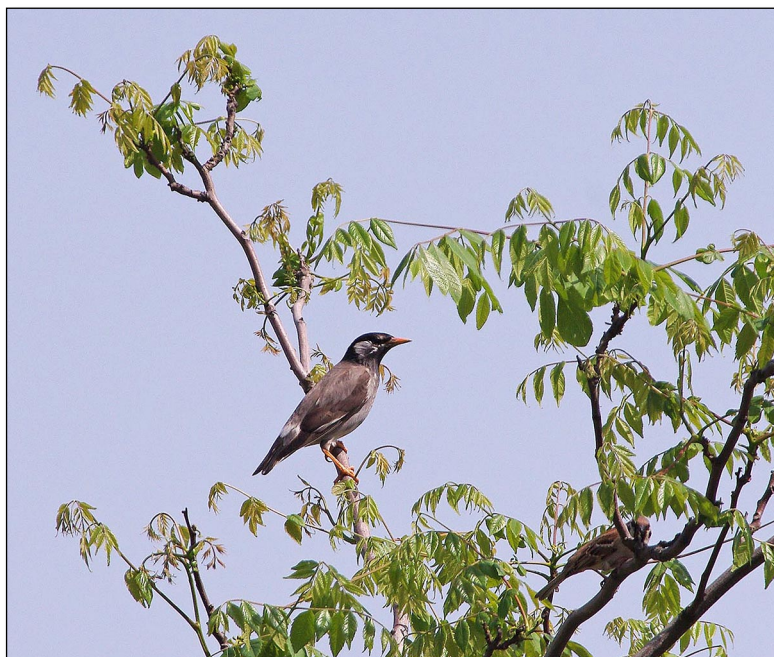

Yangsanøyene er en del av Zhoushan arkipel koblet til fastlandet via den 32,5 km lange Donghai brua. Vi gikk ombord på fergen på Lesser Yangsan mot Greater Yangsan. Greater Yangsan består mest av berg og kratt. På den sørligste delen av øya, ligger en skogkledd kollen som fungerer som en barriere for trekkfugler. Ved foten av kollen var det en liten våtmark med små dyrkede parseller. Stedet var et imponerende trekkplaster for småfugl. Spurver, sangere og andre fugler dukket opp enkeltvis eller i små flokker.

Primært var vi ute etter svovelspurv som befinner seg på øya. Vi fant spurven og i tillegg mange andre arter av buskspurv. I det lille området fant vi blant annet sibirspurv, gråhodespurv, amurspurv gulbrynspurv og dvergspurv. Dvergspurven var den mest tallrike av spurvene. Gråhodefluesnapper, asiasvartstrupe, tykknebbkråke, praktstjertmeis, trillenattergal og kinapungmeis var en del av andre artene vi fant i området. Av sangere fikk vi japansanger og østkronesanger som forventet .

### Dag 3 – Lørdag 25. april Greater and Lesser Yangsan - Dishui lake og Dongtan nature reserve

**To øyer og en innsjø.** På siste runde om morgnen rundt våtmarken og parsellene fant vi damsnipe, orientbrakksvale, blåstrupe, amurlinerle, kastanjespurv, et par sibirspurv, mer gulbrynspurv og svovelspurv. Deretter satte vi kursen mot Lesser Yangsan. Toppen av øya består av berg, kratt og en liten frodig dal som inneholdt våre første asiagråfluesnapper, fuglekongesanger, blåstjert, blåryggtrøst, cyanfluesnapper, engspurv for å nevne noen. Sibirpiplerkene sprang rundt omkring mens gruppen fikk stadig øye på nye arter. Vi kjørte tilbake mot fastlandet og hadde lunsj på en restaurant ved Dishui lake.

*Sotstær og sibirpiplerke var daglig kost på øya, foto: Trond Haugskott*

Ved Dishui innsjøen så vi flere typer ender som sibirand, kinaand, brunnakke og toppdykker. To tartarpiplerker lot seg beskue på plenene som omringet vannet. Guiden vår oppdaget krytthegren blant en del silkehegre. De to artene er svært like, men ved hjelp av en kort beskrivelse fra Lin om hvordan man skiller de to artene var det enklere å få med oss denne arten.

Litt nord for innsjøen, besøkte vi Dongtan Nature reserve. Det er en av de to eneste lokaliteter i Kina for å finne strandsanger. Denne sangeren er i slekt med sumpsanger og andre "locustella" arter. Man finner arten i takrørskog. Syngende hanner var lett å se i fluktspillet deres. I mellomtiden hørte vi rørdrum, orienttrostesanger og de to buttnebb artene som finnes i takrørskog og kratt. Blekkstrost, krøllstær, rustvarsler ble også sett der. Ved stranda fikk vi øye på en del vadere, blant annet en østspove. Resten av dagen ble brukt til transport mot Rudong, hvor vi ankom seint om kvelden på vårt hotell ved Yangkou byen.

*Fugletittere i landsbyen på Greater Yangsan og dvergspurv, foto: Kristin Vigander og Éric Roualet*

*Brunfluesnapper på Lesser Yangsan, foto: Trond Haugskott og sommerfugl, foto: Frank Grønningsæter*

**Dag 4 – Søndag 26. april Yangkou : Hotell Holiday Village of Hot Spring - Buddhist tempel - Fields West Fish Ponds- Mudderet.**

**Trekkfugler.** Dagen startet tidlig for de mest ivrige. Før frokost hadde vi en par timers tur rundt øya. Hotellkomplekset er en øy i seg selv, der bygningene står omringet av vann. Vi fant raskt mange vadere, blant annet stylteløper, damsnipe, gluttsnipe og skogsnipe. I vegetasjonen rundt omkring var småfuglene veldig aktive. Vi så østkronesanger, gulbrynsanger og amurspurv. Dessuten svartdrongo, orientkjernebiter, blåskjære og askemønjefugl, som var nye for turen.

Neste lokalitet var en av de mest brukbare stedene for å fylle opp artslista vår. Nemlig, rundt buddhist tempelet hvor det var flere biotoper som egnet seg for fugler. Her var det takrørskog, busker, dyrket mark, strand, mudder og en liten "hundremeterskog". Den lille skogen var en gullgruve av nylig ankommende sibirske arter! Lin fortalte oss at man kunne bruke hele dagen her eller ha flere runder i den lille skogen til man finner stadig nye arter. Det gjorde vi. Ved første besøk av stedet fikk vi en rekke gode arter som for eksempel østkronesanger, ussurisanger, mer gulbrynsanger, rubinstrupe, asurnattergal, skjellekronestubbstjert, blåstjert, solfluesnapper og hagebrillefugl. Andre arter ved forskjellige habitater ble også funnet som rørbuttnebb, rosenbuttnebb, rustvarsler, hærugl, orientprinia, blekkstrost, amurspurv og dvergspurv. Det var litt av en start, men det var vanskelig å se hver fugl særlig lenge. Gruppen merket at fuglene var ekstremt sky, ikke lett å komme innpå og at de forsvant fort i vegetasjonen.

*Blåstjert og østkronesanger ved tempelet, foto: Frank Grønningsæter*

Etter noen timer begynte varmen å ta hardt på oss. Med ca. 26-28 grader trakk vi oss tilbake på en restaurant til lunsj. Vi fant ut at vi måtte unngå varmen ved å hvile litt på hotellet og noen deltagere hadde en runde fuglekikking der.

*Lunsj i Yangkou, foto: Frank Grønningsæter*

Ut på ettermiddagen besøkte vi feltene vest for fiskedammene. På disse gresslettene og den dyrkede marken fant vi både dvergspove og småsove, sibirlo, tartarpiplerke, lappiplerke, rødnebbsskjære, orientlerke og krattspurv. Vi hadde en runde til ved tempelet hvor vi fant omtrent de samme artene vi fikk om morgenen.

*Frokost i Yangkou byen. Foto: Frank Grønningsæter*

**Mudderbankene.** Vi besøkte denne lokaliteten ved solnedgang, da fjæren var på sitt laveste nivå. En kort tur på det bløte mudderet var ikke lett å gå for mange. En del av gruppen sto på de hardeste underlagene av stranden, mens andre gikk videre utover. Ved første syn av en vadeflokk slo vi ned teleskopene i mudderet. En drøy halv time seinere oppdaget Lin to skjesniper i sommerdrakt. For en overraskelse! Andre arter ble også notert som for eksempel sibirsnipe, rødbrystsnipe, fjellmyrløper, asiabekkasinsnipe, tereksnipe og østspove. Dette var en del av de cirka 1500 individene vi så. Vi avsluttet dagen med en god middag på hotellet.

*Ut på mudderet i Rudong og rødbrystsnipe, foto: Kristin Vigander og Frank Grønningsæter.*

#### **Dag 5 – Mandag 27. april Yangkou: Mudderet - West Fish Ponds - Magic Woods - Buddhist Tempel**

**Mudderet.** Vi startet tidlig og hadde frokost i landsbyen før vi gikk i gjørma! En del deltagere ble igjen på hotellet denne morgenen. Mudderet var en utfordring for mange, så de bestemte seg for å ikke være med.

På mudderet i Yangkou var vi primært ut etter skjesnipe. Vi beveget oss i den myke og tykke gjørma mot flokker av vadere som rastet på mudderet. Det var stort sett å gå fra en flokk til en annen for å sjekke hvilke arter som befant seg der. Mens gulhavsmåker og dvergterner fløy over oss, så vi i våre teleskop mange tereksniper, mongollo, ørkenlo og tundralo. Til sammen 19 sibirsniper og ni polarsniper ble sett. Blant de små "calidris" artene anslo vi at vi så 1000 myrsniper og 250 rødbrystsniper. I tillegg fant vi tre sibirvandresniper og en fjellmyrløper. Etter noen timers leiting fant vi dessverre ikke skjesnipa denne gangen.

*Fast i gjørma! Kjell hjalp Øystein, Ketil unngikk fellen og Lin kom til for å hjelpe. Mongollo. Foto: Frank Grønningsæter*

Vi forlot mudderet ved lunsjtid. Når man sto fast i gjørma, var det ikke lett å befri seg fra sølen. For noen av oss var det nødvendig både å skifte og vaske klærne før måltidet.

Seinere besøkte vi fiskedammene i vest i behagelig vær. Rundt disse dammene fant vi våre første langtå- og sotsnipe. Det var bra med tre forskjellige underarter av østliggulerle og to tundrapiplerke ble også observert. I tillegg ga stedet oss hvitbrsytrikse, orientbrakksvale, sibirlo, gråhodevipe, lappiplerke og orientkjernebiter.

**Magic Woods.** Dette er stedet for sjeldenheter. I disse skogene ble blant annet bøksanger observert for første gang i øst Kina. Vi ruslet langs grusveien og prøvde å få noe spennende. Det var bra med østkronesanger i løvverket. En trillenattergal, brunfluesnapper, asurfluesnapper og en flaggspett ble observert her. Den lille skogen ved tempelet var for oss mer "Magic" enn denne lokaliteten. Vi dro ut dit ved solnedgang. I nærheten av tempelet stoppet vi ved brua. Observasjonsposten ga oss en del måker der iblant; hettemåke, mongolmåke, samoyedmåke. Vi studerte den østlige underart av makrellterne imens mange tereksniper benyttet lavvannet ved utløpet av elven. I den lille skogen ved tempelet var det mange kinesiske fotografer som satt stille og ventet på at fuglene skulle sette seg på et bestemt sted. På forhånd hadde de arrangert grener, steiner og lokkemat i form av levende larver. På vår side observert vi østkronesanger, fuglekongesanger, to brunsanger, gulbrynsanger og ussurisanger.

## Dag 6 – Tirsdag 28. april Yangkou: Mudderet - East Fish Ponds -Buddhist Tempel

**The mudd again!** Litt under halvparten av gruppen bestemte seg for ikke å delta på enda en tur på mudderet. Ledet av Peder, utforsket de stedene rundt hotellet.

*Et menneskespor blant mange spor av vadere. Skjellplukker, foto: Kristin Vigander.*

Før vi startet på mudderet brukte vi tid på å finne trekkfugler langs havets dike. Trær og busker innholdt noen trekkfugler ellers så vi fugler på trekk. Der fant vi askemønjevugl, grønnsisik, gulbrynsanger, solfluesnapper, gråstripefluesnapper og mange gulerler. Tiden var inne for å gå ut på mudderet. En tre timers tur ga en skjesnipe i vinter drakt, en fjellmyrløper, tre sibirvandresniper blant 2000 myrsniper, 250 rødbrystsniper, 200 terekksniper, seks østspove, 300 lappspove. Like før lunsj dro vi på andre siden av diket for å sjekke fiskedammene. Der var det rimelig bra med vadere blant annet spisshalesnipe og langtåsnipe. Vi dro til hotellet til lunsj og møtte resten av gruppen.

Lag to hadde også et godt utbytte av morgenen. Svartnakkepirol ble hørt og svartrødstjert, sothøne, hvitvingesvarterne var nye arter for turen. I mellomtiden spottet Trond en liten svale i lufta fra rommet vårt. Jeg kom for å studerte fuglen sammen med Trond. Det viste seg at fuglens silhuett passet best til en liten seiler uten hvit overgump. Etter å ha meldt fra til Lin om observasjonen, fant vi ut at det var en orienssalangan.

Om ettermiddagen gjorde hele gruppen seg klare til en ny tur til de østlige fiskedammene som vi hadde sjekket før pausen. En rekke vadere foragerte i disse halvtørre vannpyttene. Spisshalesnipe, langtåsnipe, damsnipe, sotsnipe, grønnstilk, skogsnipe, tundrasnipe, gluttsnipe, myrsnipe, terekksnipe, rødbrystsnipe var blant de vanligste artene. En langnebbekkasinsnipe ble funnet og seinere ble fire asiabekkasinsnipe observert. En tundrapiplerke ble også funnet her.

Nok en gang sjekket vi vår lille skog ved tempelet. Denne ettermiddagen hadde en bølge av trekkfugler nylig ankommet. Det krydde av gulbrynsangere i området. Nye arter som ble funnet var blant annet gråflankefluesnapper, mugimakifluesnapper, fire gråstrupetrost og brunhodetrost. Blant buskspurvvene fant vi amurspurv, gråhodespurv, dvergspurv og sibirspurv.

Det var en dag for vadere. Vi observerte 39 forskjellige typer vadere og det viste seg å bli vår beste dag for den artsgruppen.

**Dag 7 – Onsdag 29. april Yangkou: Buddhist Tempel, Dongtai: Mudderet og innlandet**

**Nye lokaliteter, nye muligheter.** Formiddagen startet igjen ved det Buddhistiske tempelet. Først skremte vi opp en bekkasin. Under disse dagene så vi en del bekkasiner, men vi klarte aldri å artsbestemme dem. Enten det var sibirbekkasin eller bajkalbekkasin. Vi fikk aldri anledning til å komme på en fugl som ville la seg studere på nært holdt! Vi tuslet rundt i området og en brunvarsler av ”*cristatus*” underarten ble observert. Denne underarten hekker mest fra Øst-Sibir til Kamtchatka. På dette stedet fylte vi stadig opp artslisten vår med nye arter som for eksempel asurnattergal og narsissfluesnapper

*Asurfluesnapper og narsissfluesnapper ved tempelet, foto: Frank Grønningsæter*

Vi kjørte deretter mot Dongtai. Mudderområdene ligger litt nord for Yangkou. To lokaliteter var på planen. Først mudderet og så innlandsområder for å finne kinamønjejfugl. Sur vind og litt regn gjorde at folk ikke ble fristet til å dra på mudderet. De mest ivrige tok en tur ut for å se etter vadere. Mudderet virket mer sandaktig, hardere og lettere å gå på. Et større antall med lappspove og sibirsniper var verdt å se. Vi lette fortsatt etter det vi var ute etter, nemlig skjesnipa. På ganske bra avstand sjekket Lin en liten flokk med sandløpere, rødbrystsnipe, myrsnipe og plutselig hørte vi ham utbryte, ”Oh!! a Spoony”.

Fuglen i full sommerdrakt rastet og sov mens vi studerte den. Dette var en av våre beste observasjoner av arten og etterlengtet av mange i gruppen. Vi brukte tid til å fotografere denne sjeldne vaderen. En flokk med ni asiabekkasinsnipe ble også notert.

*Spooner, sandløper og rødbrystsnipe, foto: Frank Grønningsæter*

Godt fornøyd kjørte vi litt rundt i innlandet. Vi besøkte gamle fiskedammer og et par andre lokaliteter. Ved første stopp så guiden vår en brunvingegjøk fra bussen. For europeiske fugletittere ligner denne fuglen mest på en skjæregjøk. Etter en viss tid med leting fant vi ikke fuglen igjen, men andre arter som stjertmeis og orientfink ble sett. Ved kinamønjesfugllokaliteten fant vi mange buskspurver, men det vi så mest av var amurspurv og gråhodespurv. Vi fant også en hann kastanjespurv. Vi fortsatte leitingen etter kinamønjesfugl. Åpne skoger viste seg å være et bra sted for svartdrongo, gråspett, gråhodedue, blåskjære og svartflekktrost.

*Vednesund Damstet, foto: Trond Høyen*

Tilbake til Yangkou og siste runde ved vårt favorittsted, den lille skogen ved tempelet! Narsissfluesnapper, mugimakifluesnapper, gråflanke og gråstripefluesnapper var artene vi fant. To brunsangere ble sett blant et bra antall av gulbrynsangere i området. En aurorarødstjert holdt seg ved tempelet, mens en skjellkronestubbstjert gjemte seg ”a la gjerdesmett” bak bygget. Enda en gang ble vi ikke skuffet over plassen!

*Gråhodevipe og sibirvandresnipe, Rudong, foto: Frank Grønningsæter.*

#### **Dag 8 – Torsdag 30. april Yangkou: Buddhist Tempel - Magic Woods- Fields ved Magic Woods, Dongtai: Mudderet og innlandet**

**More Spooner!** Omtrent samme kjørerute som dagen før. Vi sjekket igjen mange lokaliteter. Tempelet både om morgen og kveld. Magic Woods om ettermiddagen. Mudderet og innlandet ved Dongtai på dagen. Dagens høydepunkter var masse vadere ved Dongtai, blant annet sju skjesniper og to sakhalinsniper. I Dongtai ga observasjoner av brunvarsler og blåskjære. I Magic Woods fant vi hådrongo og gråstrupetrost. På slettene og ved takrørskogen ved Magic Woods observerte vi tre ubestemte kjerrhauker. Det var trolig praktkjerrhauk. Vi fikk også med oss andre arter som lappiplerke, tundrapiplerke, engvaktel, orientlerke, blåstrupe, dvergfalk og svartflekktrost. Tempelet hadde igjen mer å by på som for eksempel svarthalespove, hvitbrystrikse, orientugle, vendehals, asurnattergal, trillenattergal, rubinstrupe, sibirspurv, rødkinnspurv og fem fluesnapperarter.

*Mengder av spissshalesnipe og langtåsnipe i Rudong, foto: Trond Haugskott*

### **Dag 9 – Fredag 01. mai Yangkou: Buddhist Tempel, Transport Shanghai Pudong – Nanchang**

**1. mai.** Dagen ble markert av lokalbefolkningen ved tempelet. I dag var plutselig veien stengt og vi måtte betale inngangspenger for å gå i tempelskogen. Om formiddagen besøkte vi for siste gang tempelområdet før avreise mot Shanghai og Nanchang. Både ved takrørskogen og rundt templet fikk vi en gjentakelse av artene vi så denne uka i Yangkou. Tidlig lunsj i byen før vi satte oss i bussen mot Shanghai Pudong. På veien stoppet vi på en bensinstasjon ved Changxing øya og mens vi slappet av fikk vi en orientvæpsevåk flygende over oss. Vi hørte også vår første orientgrønnfink. Vi kom fram til flyplassen i god tid, men på grunn av sandstorm på flyplassen i Nanchang ble vår flyreise forsinket med to timer. Forsinkelsen fortsatte da vi satt på flyet over Nanchang, fordi flyet måtte vente på å få lande. Seint ved flyplassen i Nanchang hørte vi en syngende haukgjøk. Ved midnatt var vi på hotellet utenfor Nanchang.

*Magic Woods, foto: Eric Roualet*

### **Dag 10 – Lørdag 02. mai Nanchang - Taiching - Mt Emeifeng**

**Fujian.** De ivrige våknet tidlig og hadde en morgen tur rundt hotellet før frokost. De første artene sett i Fujian var brunvarsler av underarten *leucionensis*, sothettebylbyl, masketattertrost, grønnebbkoel, brunsanger og beltestær. Underveis møtet vi Lin og resten av gruppen. Andre arter dukket opp som lappsanger, mens en jernrikse ruslet rundt på plenen. Vi møtet opp ved bussen og ble vi kjent med lokal guiden Lao Lin. Like før avreisen så vi en gulhalsrørdrum i flukt. Det tok oss cirka fem timer med busstur til Mt Emeifeng. Underveis ble det sett følgende arter, svartbaza, mongolturteldue, bengalsporgjøk, svarthetteisfugl og orientkråke.

På halvveis ankommet vi ved i byen Taiching. Like før lunsj brukte vi litt tid ved elven i nærheten av byen. Der fikk vi sett vår første blyrødtstjert, en karakteristisk art for vassdrag. Det ble også notert gulbukprinia og maskelattertorst. I området like ved restauranten så vi en orientskjæreskvett. I kraftige regnvær forgikk handlingen av matvarer til vår oppholdt i fjellet. Vi fortsatt videre langs et vassdrag like før bussen kjørte opp mot toppen . På dette stedet hadde vi et par stopper, hvor vi fant, topphauk, froskehauk, mandarinand, orientgjøkugle, husseiler, brunfossekall, rødnebbskjære og skiferkløftstjert.

*Den vanligste rovfugl på Emeifeng forskehauk og utsikten fra fjellet, foto: Trond Haugskott.*

Nesten på toppen av Mt Emeifeng installerte vi oss på det tursiste anlegget like ved tempelet. Seinere kjørte vi ned igjen og opplevde vi fuglelivet i fjellet. Både gallafasan og sølvfasan ble observerte fra bussen. Litt gåing langs veien ga gullkinnmeis, svartbylbyl, kastanjebylbyl, kanellbrystbylbyl, torqueyuhina og okerhodelattertrost. Noen arter ble også hørt som hvitbrillesanger, brunkronesanger og kjedelattertrost. Middag ble tatt på en lokal restaurant i byen Xin Qiaoxiang.

*Overnatting stedet på Emeifeng, handlingen i Taiching, foto: Kristin Vigander*

### Dag 11 – Søndag 03. mai Mt Emeifeng - Qishang - Xin Qiaoxiang villages

**Kjøring opp og ned!** Opplegget på fjellturen var litt spesielt. Guidene våre fortalte oss om at det er best å kjøre enn å gå for å se fasaner. Fasaner forsvinner fort når de treffer på mennesker, så å kjøre sakte øker sjansen å se dem.

I fint vær startet vi dagen ved å besøke skogsåpningen ved tempelet. Stedet var tilrettelagt med treterrasser som fører til det hellig stedet. Fra disse platformene kikket vi på lokale hekkefugler som fantes der. Lisanger sang i full hals, mens en flokk prakstjertmeis streifet rundt. Talassinfluesnapper og jernskvett hadde sitt fast revir ved overnattingsstedet. Vi hørte janusugle, haukgjøk, smågjøk, og hvitpannehøne i omgivelsen.

*Lisanger og sølvfasan, Emeifeng, foto: Éric Roualet og Franck Grønningsæter*

Langs veien utforsket vi lokale steder hvor guidene hadde hørt eller sett nye arter. Gallafasan og sølvfasan ble observert på vei til en lokalitet hvor vi skulle finne dvergsmettimalen hvor den sang aktivt. For å kunne se fuglen tok vi en trang sti noen meter opp fra veien. På knær så vi fuglen i det mørkeste delen av en ganske tett bambus skrent. Andre arter dukket opp på lokaliteten som trollspett, gråhakemønjejfugl og en svartørn ble oppdaget av guiden. Det ble fokus for en del sangere hvor vi brukte tid for å se dem. Vi lyktes med rustmaskesanger og brunkronesanger mens svovelsanger og hvitebrillesanger krevde mer innsats for å bli sett.

Vi fikk sett igjen torqueyuhina i tillegg til den var grønntopptimal og masketopptimal nye. En annen topptimal ble hørt, rustkronetopptimal med sin menneskelige plystring var lett å gjenkjenne. En fugl med veldig lang hale ble sett i flukt og landet ved toppen av en grantre, for en rar fugl! Noen minutter seinere så dukket den opp igjen, med lengre tid observasjon fant vi ut at det var en hvitgumpnonne hann som fraktet lange tørre deler av en store plante blader. Hannen ble observert mens han rivet strimmelen av bladene for å bygge reirer sitt. På omtrent samme sted så vi guangdongfulvetta.

Ved Qishang og Xin Qiaoxiang ble fuglelivet litt annerledes. Husseiler, amursvaler, låvesvaler svermet over landsbyene. Forskehauk var ganske vanlig her. I kultur områdene spaserte vi for å lete etter fugler. Arter som brillelattertrost og kinafinkbylbyl ble observert, mens gråflankesigdtimal og gråspett ble hørt. Langs vassdraget fant vi blyrødstjert, hvitkronekløftestjert og en kastanjespurv. Etter lunsj fortsatt vi gåturen på den nedre del av vassdraget, mandarinand, isfugl, orientkråke, svovelsanger og en gaffelsolfugl ble observert. Vi kjørte opp igjen og fant vi omtrent de samme artene, bortsett fra en kastanjabuksteintrost som var ny art for stedet.

Vi letet etter himalayaskjeggfugl som er ganske vanlig å høre enn å se, kun en observasjon av den arten. Vi kjørte ned igjen. Vi fikk sett kinabambushøne på veien og hørte vi mange av dem. Middagen ble inntatt i byen. I mørket på veien opp brå stoppet bussen. Alle lurte på om hva som skjedde? En grønn slange krympret midt på veien. Vi studerte den giftig slangen som het Stejneger's bamboo pit viper *Trimeresurus stejnegeri stejnegeri*. Navnefar for denne slangen er Leonhard Hess Stejneger, nørskfødt amerikansk herpetologist.

*Qishang landbyen og guiden Lin i full konsentrasjon for å oppdage fugler, foto Trond Haugskott og Frank Grønningsæter*

#### **Dag 12 – Mandag 04. mai Mt Emeifeng - Zhongcundi village**

**Mystisk skog i tåke og regn.** I motsetning til forigårs været hadde skiftet helt fra strålende sol til tåke og regn. Vi startet formidagen ved å besøke slettene ved toppen av fjellet for å få med oss andre arter. Oppholdt vær på de første timene ga en rekke arter vi var kjent med. Bambushøner var ganske lyttrende samt en gråflankesigdtimal ble hørt. Orientprinia, hvitbrillesanger, lisanger, rustkronetimal var blant de artene vi fikk i området. Vi jobbet litt med lærsanger som holdt seg i buskene på slettene, denne "*locustella*" art var samarbeidsvillig å vise seg på nært holdt. Etter en stund kom regnet og mer tåke.

I følge våre guider, sånn slags vær var det beste for å se fasaner, fordi de kommer på veien. Det viste seg å være sant. Dagen før så vi totalt to gallafasan og fem sølvfasan, vi opplevde til sammen 12 gallafasan hvorav 2 hunner med årets kull med 4 unger og to hanner. Sølvfasan var det mange av dem, 20 individer ble loggført, det var også bra med bambushøner. Noen korte gåturer ut fra bussen ble det av, regnet stanset en del av gruppen som fortrakk å bli sittende i et mer tørt miljø. På veien ned i dalen fant vi en strekbrystsigtimal, først fuglene ble hørt deretter sett. Seinere ble det oppholdt vær, da sola viste seg i korte perioder. Rundtur til Zhongcundi landsbyen, gruppen beveget seg rolig i nærmiljø blant befolkningen. Der føles det at vi opplevde preget av ekte Kina. Trehus, gate med husdyr, folk som dyrket sin parseller, mannfolk drivende sin vannbøffel virket som at vi var kanskje i hundre år tilbake. Men personer med mobiltelefoner i hånda avslørte at vi befant virkelig oss i nåtid. Mongolturteldue, amursvale, gulbukprinia, blyrødstjert, skiferkløftstjert og hvitpannekløftstjert ble sett nær landsbyen. Ut i utmarker fant vi jernrikse, brillelattertrost, maskelattertrost hvitebrillesanger, svovelsanger og en oriensnokørn sirkende over området ble studert.

*Zhongcundi landsbyen, foto: Kristin Vigander.*

Lunsj ble inntatt på vår fast spisestedet og så bussen kjørte opp igjen. Ved dvergsmettimalen lokaliteten, der fuglen sang fortsatt oppdaget vi en flekkkløftstjert. Arten finnes i mindre bekker i skogkledd skrenter i motsetning til de to andre kløftstjerter som foretrekker mer åpne og større vassdrag.

*Gruppen ut i utmarken og bambusskog, foto: Trond Haugskott og Éric Roualet*

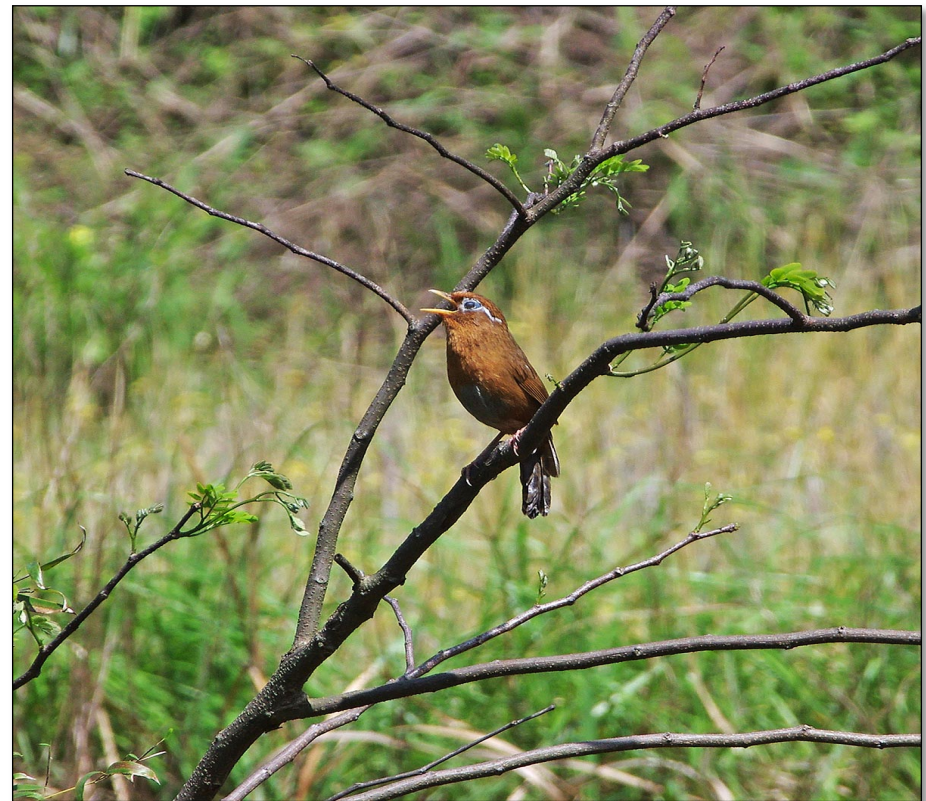

Et stykke unna gikk vi opp på bratt og gjørmet stier for å finne andre arter. Regnet gjorde ikke lett for oss å se noe der. Plutselig flakset en fasan rett foran oss, den stakkars fuglen var fanget i et snør. Fanget på et bein gallafasanen hunnen var livredde. Lin ved hjelpe av en deltager fikk sluppet fri høna som forsvant i bambusskogen.

Ankommet ved overnattingsstedet en del av gruppen ble gjenværende i rommet sitt til middag, mens resten av gruppen kjørte ned til restauranten. Avslutning for dagen i godt humør rundt bordet til å bli mer kjent med både sjåføren, Lin og Lao Lin. På veien opp i mørket opplevde vi konsert av tusenvis av syngende frosker, nå kjente vi at hauken som fins der het froshauk!

### **Dag 13 – Tirsdag 05. mai Mt Emeifeng - Huang Pi Gang village – Nanchang- Shanghai Pudong.**

**For en fugl!** Det ble avklart om vi bestemt oss å forlate området tidlig på formiddagen og ikke være lenger på den tåkete fjellet. Alternativet var at Lin guidet oss i lavlandet områder like ved Nanchang. Vi brukte tid langs vassdraget for å finne brunfossekallen som ikke alle deltager hadde fått med seg noen dager tidligere. Ned i dalen speidet vi etter fugler, brunfossekallen ble gjenfunnet samt en oriensnokørn og en blåplystretrost, siste nevnte var ny art for turen.

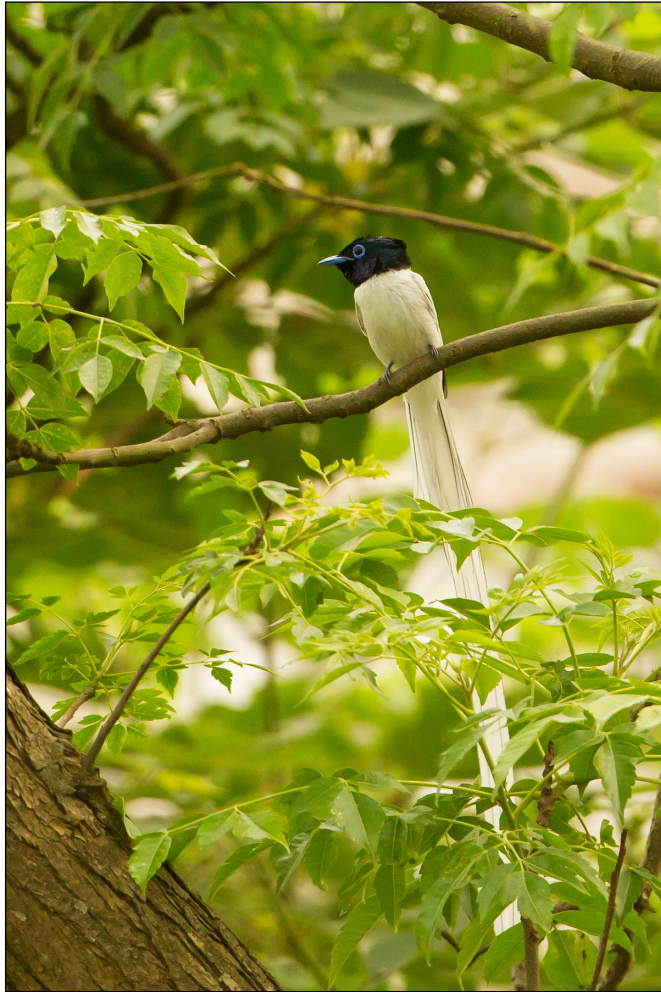

Etter noen timer med busstur var vi ankommet en mil sør for Nanchang. Ved landsbyen Huang Pi Gang spaserte vi rundt kulturområdene, fiskedammer og i landsbyen. Kinaand, beltestær, gulbukprinia, brunvarlser, svartdrongo, og en syngende lappsanger ble funnet. Vi oppdaget en rekke nye arter som tigervarsler, gjøk, bengalsporegjøk som er relativt vanlig i kulturlandskapet og svartvingelarveeter.

*Bengalsporegjøk ved Huang Pi Gang og brillelattertrost i Emeifeng, foto: Frank Grønningsæter og Trond Haugskott*

Like før vi dro, en gallapardismonark dukket opp ved stien, hvit morfen av den arten var en uforglemmelig syn for oss. For en fugl! Kledd i hvit drakt med blå øyeringer kontrastene på et svart hodet, forlenget kropp med en veldig lange hale. To muskatnonne ble observert på stedet og var siste artene vi loggførte for turen.

*Gallapardismonark og kinabylbil, foto: Frank Grønningsæter og Trond Haugskott*

Ved flyplassen avskjeden med både sjåfør og Lao Lin. Nok en gang til vårt fly var forsinket! Ankomst på Shanghai Pudong hotellet avskjed med Lin og deltagere og overnatting på stedet.

## Dag 14 – Onsdag 06. mai Shanghai Pudong - Helsinki - Oslo

**Hjemreisen.** Ved sju tiden tok vi vår siste kinesiske frokost og dro mot flyplassen. Siste arter sett på formidagen var den vanligste kinabylbyl, vinhegre, amurlinerle, kuhegre, natthege og rustvarsler. Behagelige flyturer uten forsinkelser brakt hele gruppen til Gardermoen ved 16 tiden norsk tid. Det lå mye inntrykkene blant deltakere med både naturen, fuglelivet, mat opplevelser og befolkning som gjorde at turen ble vellykket for måltartene vi var ut etter.

## NoF Travel Øst Kina april - mai 2015
